

Problem: Build a website for patient registration.

Requirements:

1. The patient has to submit their name, date of birth, phone number, email, address, photo (driver license) and appointment time to register.
2. The admin should be able to view all the registered patients from the website.

Design: Your choice, but we look for beautiful websites.

Languages: Your choice, but we prefer Go for the backend and React for the client.

Time: 48hrs

Deliverables:

1. A git repo with the source code
2. A few screenshots of your website
3. A README file on how to access your website. It could be hosted remotely or locally. If it's a local host, please include some instructions as how to set up a local server and access the website.
